

(Decision Boundary)

Logistic Regression:
$$f_{\vec{w},b}(\vec{z}) = g(\vec{w}.\vec{z}+b) = \frac{1}{1+e^{-(\vec{w}.\vec{z}+b)}} = P(y=1|\vec{z};\vec{w},b)$$

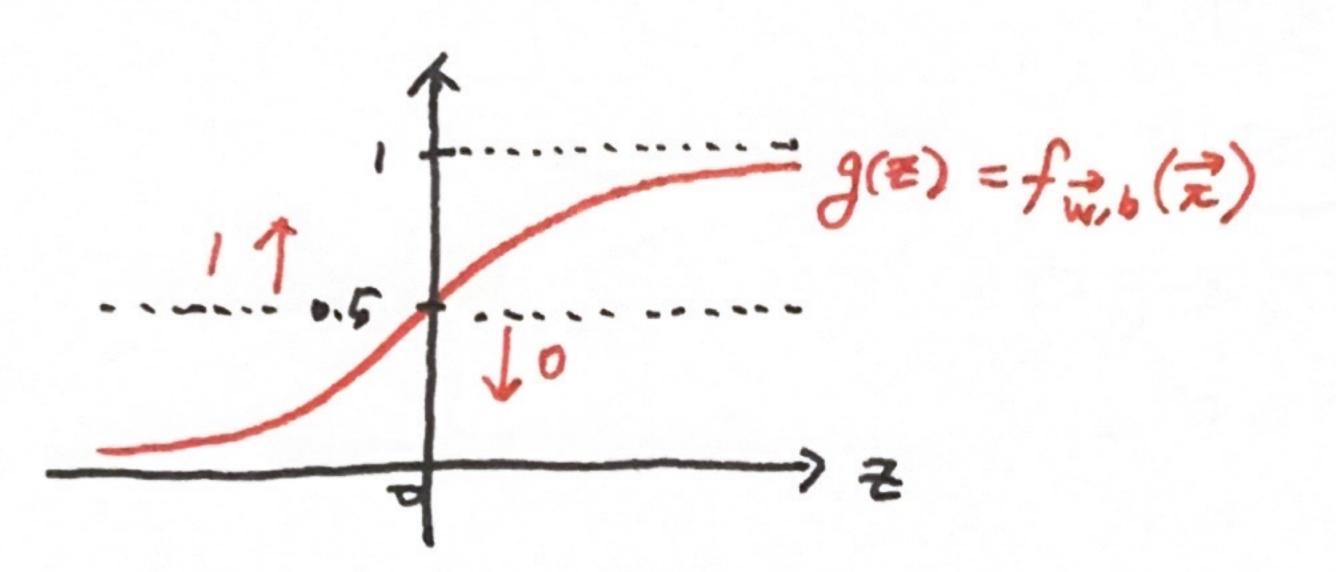

1

input feature 고가 어떤 값은 가지면 logistic regression model의 output이 이 유니이 되가?

>> sigmoid function의 값이 0.5 이상이전 1, 0.5 버란이면 0 아냐는 rule set

Is
$$f_{\vec{w},b}(\vec{z}) \geq 0.5$$
?
 $\Rightarrow \text{ Yes} : \hat{y} = 1 / \text{No}: \hat{y} = 0$

$$) \Rightarrow y = \{1 \text{ if } f_{\vec{w},b}(\vec{z}) \geq 0.5 \text{ of } f_{\vec{w},b}(\vec{z}) < 0.5\}$$

When is fa, b(2) 20.5?

When is fin(z) < 0.5?

Herns $\Rightarrow g(3) \ge 0.5$ Herns $\Rightarrow Z \ge 0$ Herns $\Rightarrow Z \ge 0$ $\Rightarrow Z \ge 0$
